

World Federation of Physics Competitions

secretary: Stefan Petersen petersen@ipn.uni-kiel.de

The World Federation of Physics Competitions (WPhC) was founded in 2002 in Bali with the aim to promote excellence in and research with physics education through the use of secondary school physics competitions.

We are active worldwide. Our members are living and working in all continents.

To our members we send out a regular newsletter and publish an online-journal with articles related to physics competitions, normally twice a year. Furthermore we organise a biannual Congress with a topic concerning our aims.

Here you can see a lecture and secondary school experiments, done by some participants of the 4-th Congress-2010 in Croatia.

We invite you to become a member of our Federation and to take part in our world wide activities. The membership is free of charge.

Helmuth Mayr / Austria
president
